

Java

```
class Solution {  
    public int timeRequiredToBuy(int[] tickets, int k) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} tickets  
 * @param {number} k  
 * @return {number}  
 */  
var timeRequiredToBuy = function(tickets, k) {  
  
};
```

C++

```
class Solution {  
public:  
    int timeRequiredToBuy(vector<int>& tickets, int k) {  
  
    }  
};
```

C#

```
public class Solution {  
    public int TimeRequiredToBuy(int[] tickets, int k) {  
  
    }  
}
```
